P Derwent Abstract:

(RU2123357C) Novelty - Method of increasing nonspecific resistance of organism

for nervous system disorders.

Detailed Description - An organism is affected by hypoxic gas mixture containing 9-16% oxygen and 91-84% nitrogen first for 3 to 5 minutes with a 2-minute pause used for breathing with atmosphere air while gradually increasing total daily hypoxic time from 15 to 55 minutes during first eight days. On following three days, hypoxic breathing is performed for 5 to 10 minutes with the same pause and total daily

hypoxic time 60 min. Course of treatment is repeated 3-4 months later.

Use - The method is used in neurological diseases.

Advantage - The method considerably increases the resistance of organism and

reduces treatment time.
